

ALL IN THE APPLICATION

Tribos® is the only protective coatings company to mechanically prepare vehicles before application. Our certified **Tribos®** technicians use only the best materials and bespoke products.

The **Tribos®** preparation process ensures a 100% contaminant free surface. Without preparation, protective coatings simply don't work as well and will fail prematurely.

All products are unique to us and applied only by our trained applicators across the world. We quality control the whole process, which enables us to provide a genuine guarantee of performance. This is how our products won in independent tested against the market leading competitors.

THE TOTAL SOLUTION

Tribos® offers total unrivalled protection, for the entire vehicle...

- **PAINT:** A non-ceramic, 3-stage mechanical application, 24-hour air-cure, flexible protective coating. Developed to create a high-gloss finish making cleaning easier, and polishing a chore of the past. Engineered to resist 99% of all aggressive contaminants
- **GLASS:** The highest performing hydrophobic barrier on the market today. Non-silicon, 3-stage application only, 4-hour air-cure spirit-based protective coating
- **ALLOY:** A ceramic-based polymer coating specifically designed to resist brake dust, tar and general road contaminants. Makes cleaning wheels so easy, the dirt comes straight off with a spray
- **FABRIC:** A high-performing hydrophobic barrier for interior vehicle fabrics. Engineered to resist most liquids and staining solids

THE WORLD'S MOST DURABLE PROTECTIVE COATINGS

The Preservation of Perfection

THE PRESERVATION OF PERFECTION

Tribos® is not a polish or a conventional surface treatment. It's a state-of-the-art process – a genuine scientific breakthrough.

An active polymer shield so durable, that brilliance is locked in for years.

For paint, glass, alloy and fabrics, it's the ultimate in total vehicle protection.

Tribos®. The Preservation of Perfection

BORN IN THE WORLD'S HARSHTEST ENVIRONMENT

Tribos® is unique. It's the only product available for automotive application proven to work in the most aggressive environment of all - Marine.

DELIVERING UNBELIEVABLE PERFORMANCE

Being engineered for the harshest of environments means **Tribos®** will handle anything the streets can throw at it.

The results are astonishing:

- A "better-than-new" vehicle shine that lasts and lasts
- Surfaces are protected from UV, acid rain, oil & exhaust fumes, birdlime and traffic film
- Visibility is improved on glass surfaces leading to improved safety
- Dirt just falls away from the surface with a simple wash down

THE SCIENCE OF SURFACES

Born of laboratory science, the **Tribos®** polymer is a chemically complex, high-performance sacrificial barrier.

The **Tribos®** polymer is a powerful product designed to be mechanically applied. During air curing, the 'tails' of each individual polymer slowly cross-link over 24 hours to form the unbeatable, ultra-thin, wholly transparent layer. **Tribos®** is impregnated with titanium oxide, which reflects UV light, preventing colour fade.
